2010 County Highlights

- Healthy Ventures coordinated and provided technical assistance to schools in the School Health Index and school health improvement plans. Ongoing changes at the middle and high school levels provide increased access to physical activity opportunities as well as healthier school food choices.
- ♦ Health Ministry teams trained in Search Your Heart Curriculum to encourage health policy and environmental changes in local congregations.
- Tribble Center incorporated Eat Smart Move More training for staff and instruction for consumers.
- ♦ Community gardens were developed and expanded to offer consumers more access to plant, grow, harvest and cook fresh vegetables at individual home sites.
- Raised bed garden and Color Me Healthy curriculum implemented at Blue Ridge Elementary School.
- Access Health Assessment process began to look at access to healthcare for persons without adequate health care coverage including persons suffering from chronic illness related to lifestyle choices.

	Where and how changes can be made in all counties:		
Community:	Construct new trails or greenways, construct bike lanes, create farmer's markets, increase cropland acreage harvested for fruit and vegetables		
Schools:	Implement a Safe Routes to School program, participate in a fruit and vegetable program, incorporate physical and nutrition education into the curriculum		
Worksite:	Implement a healthy eating policy, establish a breastfeeding-friendly worksite,		
Child Care:	Limit sedentary time for children, establish a school garden, participate in "Fresh on Campus" program		

²The physical activity recommendation says that adults should do at least 150 minutes (2 hours and 30 minutes) a week of moderate-intensity, or 75 minutes (1 hour and 15 minutes) a week of vigorous-intensity aerobic physical activity or a combination of the moderate and vigorous-intensity physical activity.

Obesity can lead to such health risks as elevated cholesterol, diabetes, high blood pressure, sleep apnea, orthopedic complications, and mental health problems.

Updated: April 2011

¹The Centers for Disease Control (CDC) defines overweight as having a body mass index (BMI) between 25 (lbs./in²). and 29.9 (lbs./in²). Obesity is defined as having a BMI greater than 30 (lbs./in²). For children age 2 to 20 years old, CDC has developed a definition of overweight and obesity based on the 2000 CDC growth charts for age and sex. Children and youth who are between the 85th and 95th percentiles are considered overweight; children and youth who exceed the 95th percentile on these charts are considered obese.

³ Recommended fruit and vegetable consumption is 2+ fruits and 3+ vegetables daily.
